
Special Care Interventions: Mandatory Quality Review

I. Procedure

1. Through a quality assurance review process, directly involving the EMS Agency Medical Director (AMD), developed by the local program and approved by the AMD. and the Director of the Department of Health, the local agency will review the runsheet and patient outcome records to determine the appropriateness of each individual use or the skill or administration or the medication. If the pilot procedure or medication is judged to be an appropriate intervention, the occurrence is added to the agency database and forwarded to the Director of the Department of Health.
2. If a variance or questions arise from the review of the case, a case review conference will be held with the provider, the AMD. and if indicated, the online medical consultant with the summary of the findings to be reported to the Director of the Department of Health.
